

Meet Fabien Gaboriaud – Michelin's new representative on Enviro's board

A competitive person who is passionate about innovations and who wants to help Enviro win. This is how Fabien Gaboriaud, Michelin's new representative on Enviro's board, describes himself and his assignment.

With the title of Senior Vice President Sustainable Materials and Circularity, Fabien Gaboriaud is overall responsible for Michelin's strategic investments in environmentally sustainable materials and circularity. Gaboriaud joined Michelin in 2009 and has more than 40 years of combined experience in materials research. His career began with a PhD in physical chemistry which led him to a research position at France's National Research and Science Center in Nancy, Centre National de la Recherche Scientifique.

Since 2017 he has been material research director with the responsibility to develop material related innovations for tire applications and for the new high tech materials division, in particular within the domains of sustainable materials, hydrogen, medical and flexible composites. On July 1, 2023, he joined the high tech materials division as Senior Vice President Sustainable Materials and Circularity. In his new role he is responsible for coordinating and orchestrating the company's internal and external strategies in the area.

After attending his first meeting with the board of Enviro, he says he is very proud of the new board assignment.

"I really appreciated the exchange with the other board members and our first meeting," he says.

Gaboriaud describes Michelin's commitment to Enviro as very strong, as evidenced by both his appointment to Enviro's board and Michelin's ownership. When it comes to what he can contribute to Enviro, he has no hesitation.

"I don't take a board position to fail, but will put all my energy into this. I am a distinctly competitive person who does not want to follow. My goal is to help with my skills to develop the right strategy and to help Enviro to win," Fabien Gaboriaud says.

Scandinavian Enviro Systems contributes to enhanced environmental and economic sustainability using a patented technology for the recovery of valuable raw materials from scrapped and end-of-life products, including tires. The production of new tires using carbon black recovered with Enviro's technology reduces carbon dioxide emissions by up to 93 per cent compared with the use of virgin carbon black. Enviro has its head office in Gothenburg and a plant for the recycling of end-of-life tires in Åsensbruk. The largest owner is the French tire manufacturer Michelin. Enviro was founded in 2001 and is listed on Nasdaq First North Growth Market. www.envirosystems.se
